

GABRIEL GADELHA DA SILVA

Django / Python Developer | Full-Stack

Manaus, Brazil • Available for remote work and international relocation
gabrielgadelha.dev@gmail.com • +55 92 98418-2265 • linkedin.com/in/gabrielgadelha-dev • github.com/gabztoo
International relocation at own expense upon job offer.

Professional Summary

Developer specializing in **Django and Python**, with experience building end-to-end REST APIs, production corporate systems and process automation. Proficient in Django REST Framework, JWT authentication, relational database modeling, migrations and CI/CD. Complementary experience with PHP, React and Angular. Uses LLM as engineering accelerators with code review.

Professional Experience

Grupo Bringel — Django / Python Developer

Manaus, Brazil

Apr 2025 – May 2026

- End-to-end development of a **production corporate scheduling system**: requirements gathering, data modeling, REST API development, frontend, automations and production support.
- Building and maintaining **20+ REST endpoints** with **Python, Django and Django REST Framework**, using serializers, viewsets, filters, pagination, validations and standardized error handling.
- Implementation of **JWT authentication** and role-based permissions, protecting operations and data according to user profile.
- Frontend development with **Angular, React and TypeScript** for records, dashboards, reports and operational workflows.
- **PostgreSQL and SQLite** modeling and maintenance: relationships, constraints, migrations, referential integrity and change traceability.
- Import and validation of **1,300+ records** from CSV, with data normalization, duplicate control and invalid record handling.
- Automation of **approximately 2,500 monthly WhatsApp notifications**, plus development of **6 operational reports** and dashboards for tracking and decision-making.
- Implementation of audit logs, status control, scheduled tasks, error handling and critical operation tracking.
- API documentation and validation with **Swagger/OpenAPI and Postman**. Version control, code review and CI/CD pipelines via **Git and Azure DevOps**.
- Production incident investigation through log analysis, SQL queries and flow tracking between frontend, API and integrations.

Spaay — Full-Stack Developer | Process Automation (Temporary Contract)

Remote

May 2026 – Present

- End-to-end PHP development for restaurant, logistics and delivery platforms: geolocation, real-time tracking and route optimization.
- Integration via REST APIs and webhooks, automations with Python and Playwright for data extraction and synchronization.
- Incident investigation between backend, frontend and databases; LLM usage as engineering accelerators.

IB Investimentos — Full-Stack Developer | Independent Contractor

Remote

May 2026 – Present

- Development of **Hydra OS**, modular financial platform with PHP backend, React/TypeScript frontend, MySQL modeling and Evolution API integration.
- Docker containerization, Linux/Nginx deployment. Full responsibility for requirements, architecture and product evolution with LLM-assisted code review.

Competencies

Languages: Python, PHP, JavaScript, TypeScript, SQL **Backend:** Django, DRF, FastAPI, REST APIs, JWT, Celery
Databases: PostgreSQL, MySQL, SQLite, Firestore **Frontend:** React, Angular, TypeScript, Tailwind CSS
DevOps: Docker, Git, Azure DevOps, CI/CD, Linux, Nginx **Automation & AI:** Playwright, Evolution API, Claude Code, OpenAI Codex, LLM-assisted development

Education and Languages

Degree in Systems Analysis and Development — FAMETRO, 2026
